

Founded in 2025 by Professional Engineer and Master Electrician Dale Krall, Nodal Electrical Engineering (NEE) delivers electrical consulting services grounded in deep technical knowledge, construction experience, and long-standing relationships across Southern Alberta. With over two decades in the industry and a portfolio of projects spanning healthcare, education, commercial, and industrial sectors, we bring a practical, solutions-driven approach to every engagement.

NEE is built on a forward-thinking philosophy: embrace modern tools, uphold technical excellence, and stay deeply rooted in the communities we serve. Our team understands that successful design starts with constructability and ends with trusted execution. We are proud to offer personalized service, hands-on leadership, and design solutions that prioritize performance, longevity, and sustainability.

Our work is guided by the core values of collaboration, expertise, and adaptability—principles that shape every project, partnership, and solution we deliver.

Connection. By Design.
